What is claimed is:

- 2 1. A method for locating a mobile telephone handset using a web browser, the
- 3 method comprising:

1

- 4 providing an interface for a user to log on to a location finder service and enter a
- 5 telephone number of a mobile handset to be tracked, wherein the user logs on to the
- 6 location finder service using a web browser on a computer;
- 7 authenticating the user and the telephone number;
- 8 passing the telephone number to a position determination system;
- 9 determining a location of the mobile handset associated with the telephone
- 10 number; and
- displaying the location of the mobile handset on a display device of the computer.
- 12 2. The method of claim 1, wherein the determining step further comprises accepting
- messages from the mobile handset through signaling system 7 (SS7) networks.
- 14 3. The method of claim 1, wherein the determining step further comprises
- determining a base station identification of the mobile handset.
- 16 4. The method of claim 1, wherein the determining step further comprises
- triangulating an approximate position of the mobile handset.
- 18 5. The method of claim 1, wherein the determining step further comprises
- determining geosynchronous satellites with which the mobile handset communicates.
- 20 6. The method of claim 1, wherein the determining step further comprises
- 21 calculating a position of a global positioning system (GPS)-enabled mobile handset based
- 22 on satellite timing signals.
- 7. The method of claim 1, further comprising enabling the user to register one or
- 24 more mobile handset with the location finder service.
- 25 8. The method of claim 1, further comprising enabling the user to track a mobile
- 26 handset by paying a fee.
- 27 9. A system for locating a mobile telephone handset using a web browser,
- 28 comprising:
- an interface that enables a user to log on to a location finder service and enter a
- telephone number of a mobile handset to be tracked, the user logging on to the location
- 31 finder service using a web browser on a computer;
- a position determination system operably connected to the interface, the position
- determination system interacting with a mobile switching center to determine a location
- of the mobile handset associated with the telephone number;

- a display device that displays the location of the mobile handset on the computer.
- 2 10 The system of claim 9, wherein the interface is a world wide web (WWW)
- 3 interface.
- 4 11. The system of claim 9, wherein the position determination system accepts
- 5 messages from the mobile handset through signaling system 7 (SS7) networks.
- 6 12. The system of claim 9, wherein the position determination system accepts
- 7 messages from the mobile handset through transmission control protocol/Internet protocol
- 8 (TCP/IP) networks.
- 9 13. The system of claim 9, wherein the position determination system determines a
- base station identification of the mobile handset.
- 11 14. The system of claim 9, wherein the position determination system triangulates an
- 12 approximate position of the mobile handset.
- 13 15. The system of claim 9, wherein the position determination system determines
- 14 geosynchronous satellites with which the mobile handset communicates.
- 15 16. The system of claim 9, wherein the display device displays a map of the location
- of the mobile handset on the computer.
- 17. The system of claim 9, wherein the interface authenticates the user and the
- telephone number through username and password verification.
- 19 18. The system of claim 9, wherein the mobile handset is global positioning system
- 20 (GPS)-enabled.
- 21 19. The system of claim 9, wherein the mobile handset is registered with a code-
- 22 division multiple access (CDMA) carrier.
- 23 20. A computer readable medium providing instructions for locating a mobile
- 24 telephone handset using a web browser, the instructions comprising:
- providing an interface for a user to log on to a location finder service and enter a
- 26 telephone number of a mobile handset to be tracked, wherein the user logs on to the
- 27 location finder service using a web browser on a computer;
- authenticating the user and the telephone number;
- 29 passing the telephone number to a position determination system;
- determining a location of the mobile handset associated with the telephone
- 31 number; and
- displaying the location of the mobile handset on a display device of the computer.
